<i>Preface</i>	<i>page xi</i>
1 Logic-Based Approach to Agent Design	1
1.1 Modeling an Intelligent Agent	1
1.2 Simple Family Knowledge Base – An Example	4
1.3 A Historical Comment	6
Summary	8
References and Further Reading	9
Exercises	10
2 Answer Set Prolog (ASP)	11
2.1 Syntax	11
2.2 Semantics	16
2.3 A Note on Translation from Natural Language	30
2.4 Properties of ASP Programs	31
Summary	35
References and Further Reading	35
Exercises	36
3 Roots of Answer Set Prolog	40
3.1 First-Order Logic (FOL)	40
3.2 Nonmonotonic Logics	43
3.3 ASP and Negation in Logic Programming	49
Summary	57
References and Further Reading	57
Exercises	58
4 Creating a Knowledge Base	61
4.1 Reasoning about Family	62
4.2 Reasoning about Electrical Circuits	71

4.3 Hierarchical Information and Inheritance	75
Summary	81
References and Further Reading	82
Exercises	83
5 Representing Defaults	86
5.1 A General Strategy for Representing Defaults	86
5.2 Knowledge Bases with Null Values	93
5.3 Simple Priorities between Defaults	95
5.4 Inheritance Hierarchies with Defaults	99
5.5 (*) Indirect Exceptions to Defaults	103
Summary	108
References and Further Reading	108
Exercises	109
6 The Answer-Set Programming Paradigm	114
6.1 Computing Hamiltonian Cycles	115
6.2 Solving Puzzles	121
Summary	127
References and Further Reading	128
Exercises	129
7 Algorithms for Computing Answer Sets	131
7.1 Finding Models of Propositional Formulas	131
7.2 Finding Answer Sets of Logic Programs	136
Summary	149
References and Further Reading	150
Exercises	150
8 Modeling Dynamic Domains	152
8.1 The Blocks World – A Historic Example	152
8.2 A General Solution	162
8.3 $\mathcal{AL}$ Syntax	166
8.4 $\mathcal{AL}$ Semantics – The Transition Relation	167
8.5 Examples	175
8.6 Nondeterminism in $\mathcal{AL}$	184
8.7 Temporal Projection	186
Summary	187
References and Further Reading	188
Exercises	189

9	Planning Agents	192
9.1	Classical Planning with a Given Horizon	192
9.2	Examples of Classical Planning	195
9.3	Heuristics	204
9.4	Concurrent Planning	208
9.5	(*) Finding Minimal Plans	209
	Summary	211
	References and Further Reading	213
	Exercises	214
10	Diagnostic Agents	216
10.1	Recording the History of a Domain	218
10.2	Defining Explanations	220
10.3	Computing Explanations	224
10.4	(*) Finding Minimal Explanations	228
10.5	Importance of New Predicates <i>hpd</i> and <i>obs</i>	229
	Summary	231
	References and Further Reading	232
	Exercises	232
11	Probabilistic Reasoning	235
11.1	Classical Probabilistic Models	235
11.2	The Jungle Story in P-log	238
11.3	Syntax and Semantics of P-log	241
11.4	Representing Knowledge in P-log	251
11.5	(*) P-log + CR-Prolog and the Wandering Robot	263
	Summary	266
	References and Further Reading	267
	Exercises	267
12	The Prolog Programming Language	271
12.1	The Prolog Interpreter	271
12.2	Programming in Prolog	284
	Summary	304
	References and Further Reading	305
	Exercises	305
	Appendix A: ASP Solver Quick-Start	307
	Appendix B: Aspide	310
	Appendix C: Introduction to SPARC	314

Appendix D: Code	317
D.1 ASP Encoding of the Igniting the Burner Example	317
D.2 ASP Encoding of the Missionaries and Cannibals Example	320
D.3 ASP Encoding of the Circuit Diagnostic Example	325
<i>Bibliography</i>	331
<i>Index</i>	343
